The API binding for Java can be used to access TestRail's API from Java and Java-based languages. It provides the basic functionality to authenticate API requests, provides seamless JSON and UTF-8 encoding/decoding and has generic support for read and write requests. Please see below for several examples on how to use the API binding. The source code for the binding can be found on GitHub:
API Binding: Java [TestRail Documentation]
The Java Persistence API (JPA) is a Java application programming interface specification that describes the management of relational data in applications using Java Platform, Standard Edition and Java Platform, Enterprise Edition. Persistence in this context covers three areas: the API itself, defined in the javax.persistence package; the Java Persistence Query Language (JPQL)

The Apache POI Project's mission is to create and maintain Java APIs for manipulating various file formats based upon the Office Open XML standards (OOXML) and Microsoft's OLE 2 Compound Document format (OLE2).

Apache POI - the Java API for Microsoft Documents
In computer programming, an application programming interface (API) is a set of subroutine definitions, communication protocols, and tools for building software. In general terms, it is a set of clearly defined methods of communication among various components. A good API makes it easier to develop a computer program by providing all the building blocks, which are then put together by the ...

Geocoding is the process of converting addresses (like a street
address) into geographic coordinates (like latitude and longitude), which you can use to place markers on a map, or position the map. Reverse geocoding is the process of converting geographic coordinates into a human-readable address. You can also use the Geocoding API to find the address for a given place ID.
