Urine odor: Symptom — Learn when unusual urine odor might point to an underlying condition or disease.

Urine odor — Mayo Clinic
Mala are the substances or waste matter to be thrown out of the body. They are actually by products formed as a result of various physiological activities going on in the body.

Mala in Ayurveda — Significance of Mala, Three Forms Of Mala
Some foods and medications, such as asparagus or certain vitamins, can cause a noticeable urine odor, even in low concentrations. Sometimes, unusual urine odor indicates a medical condition or disease, such as:

Urine odor Causes — Mayo Clinic
A urostomy is a surgical procedure that creates a stoma (artificial opening) for the urinary system. A urostomy is made to avail for urinary diversion in cases where drainage of urine through the bladder and urethra is not possible, e.g. after extensive surgery or in case of obstruction.

Urostomy — Wikipedia
A look at urine that smells like ammonia, which can have many causes. Included is detail on when to see a doctor and treatments for the condition.

Urine smells like ammonia: Causes, treatments, and symptoms
Sodium is an electrolyte present in all body fluids and is vital to normal body function, including nerve and muscle function. This test measures the level of sodium in the blood and/or urine. Sodium, along with other electrolytes such as potassium, chloride, and bicarbonate (or total CO 2), helps cells function normally and helps regulate the amount of fluid in the body.

Sodium — Patient Education on Blood, Urine, and Other Lab ... 24 Body fluids. Fluid in the cavities that surround organs may serve
as a lubricant or shock absorber, provide circulation of nutrients, or function for collection of waste.

Lawn Dog Damage Prevention and Repair
A blockage (obstruction) anywhere along the urinary tract—from the kidneys, where urine is produced, to the urethra, through which urine leaves the body—can increase pressure inside the urinary tract and slow the flow of urine.

Urinary Tract Obstruction - Kidney and Urinary Tract ...
L'urine est l'un des liquides biologiques produits par les animaux, incluant les humains. Elle constitue la plus grande part des déchets liquides du métabolisme de l'organisme des vertébrés. L'urine est sécrétée par les reins par filtration du sang, puis par récupération des molécules de l'urine « primitive » pour former l'« urine définitive ».

Less fluid in the body: In older people, the body contains less fluid. Only 45% of body weight is fluid in older people, compared with 60% in younger people. This change means that a slight loss of fluid and sodium, as can result from a fever or from not eating and drinking enough (sometimes for only a day or two), can have more serious consequences in older people.
