"I am considering purchasing a boat that has an OMC 140 (4-cylinder, 181 cubic inch) I/O engine. The boat is 1979 so I assume the engine is same vintage. The seller of the boat says this engine was nicknamed "iron horse" because of reliability. The engine has 1100 hours on the clock and has been used exclusively in fresh water.

My 1994 [Evinrude 140-HP outboard engine that employs] loop-charging has a misfire. [The Evinrude 140-HP engine] would normally [accelerate to] 5,500-PRM, but now only [accelerates to] 4,000-RPM. It sounds like it has one cylinder not firing, and one spark plug is very black.

Evinrude 140-HP Misfire – CONTINUOUSWAVE
Your 140 engine is actually 181 cu in or 3.0 liter. These engines were never used in cars but were an industrial/marine engine. They have a pretty good cyl head but it can still benefit from a little port work. They accept hi perf sbc valves and springs although most of them come with a 1.94 intake and a 1.6 exh valve.
