Geochemistry is the science that uses the tools and principles of chemistry to explain the mechanisms behind major geological systems such as the Earth's crust and its oceans. The realm of geochemistry extends beyond the Earth, encompassing the entire Solar System, and has made important contributions to the understanding of a number of processes including mantle convection, the formation of ...

Open Access Publications. These are publications made freely available by either the author, a funding organization, or MSA. MSA will host additional open access publications about mineralogy, crystallography, petrology, and geochemistry that it believes to be of interest to its membership.

Mineralogical Society of America - Open Access Publications
Chemical Composition of Meteorites. I suggest to people who think they have found a meteorite to get a chemical analysis by Actlabs or some other lab that can provide good compositional data. There are several different ways to determine whether or not a rock is a meteorite.

Chemical Composition of Meteorites
Predicted data is generated using the US Environmental Protection Agency’s EPISuite™. Log Octanol-Water Partition Coef (SRC): Log Kow (KOWWIN v1.67 estimate) = 4.35 Log Kow (Exper. database match) = 4.45 Exper.

Fluorene | C13H10 | ChemSpider
During the recharge in an open system we can calculate the oxygen content with some empirical formulas or by simulation (e. g. Phreeqc). For example at 20ºC the water can dissolve approximately 9 ... Can groundwater have dissolved oxygen? - ResearchGate
Information on manuscript types, including length constraints, can be found on our general information for authors page. The instructions below apply to an initial submission. For a manuscript ... Instructions for preparing an initial manuscript | Science ...
